Fundamental Underglazes

These Underglazes may be applied to wet clay, greenware, or ^04 bisque; use for design or solid coverage, firing range from ^06 earthenware to ^6 stoneware clay bodies, but test your results for ^10 high fire. To intensify the color or for use on dinnerware, apply clear glaze.

*Due to chrome pigment reformulations, it is recommended to use SW004 Zinc-Free Clear glaze, when firing these underglazes to ^6.

ONLY when using on wet clay or greenware - apply and allow to dry. Fire to shelf ^04. You may apply clear glaze and refire to ^06-^05 for earthenware and ^5-^10 for stoneware. Dry greenware can absorb the colors quickly, so apply a water-thinned first coat as a primer.

For use on bisque - lightly dampen the ware prior to applying to ^04 bisque. Apply clear glaze if desired and refire according to clay body (check the product labels for ^10 results). Only use either brush or sponge to apply glaze. The colors are intermixable and create unique blends if mixed when wet. Perfect for using on your sgraffito designs! Many of the glazes will hold up well to ^6 firing temperatures.

Co-fire with Clear: these glazes can be fired in a single firing. Outgasing will happen, so increase the hold time an additional 15 minutes.

Heat work is good! If ^06 does not develop the color you want - go hotter. Mayco recommends ^03-^04 and some artists go even hotter.

Fundementals will NOT move! They are nontoxic and foodsafe as long as clear glaze has been applied over entire glazed surface.

Spectrum Underglazes

These glazes are dinnerware safe when covered with a clear glaze. These can be applied to bisque or greenware and fired to cone 06 - 10, but test fire for color shifts when firing at the higher ^6 - ^10 temperatures. Two to three coats are best for opaque, vibrant colors.

** For SP536 ***ONLY*** - a clear glaze will ruin this color at cone 6, but works great at cone 06 **

Spectrum Underglaze Base

Make your own underglazes! This underglaze has some frit in it, which acts as a flux to help the stain be a compatible fit with either greenware or bisque. It aslo has various additives which keep the frit and stain suspended and makes it brush on smooth and easy. It is lead free, non-toxic, and dinnerware safe when covered by a dinnerware safe clear glaze. To get similar colors as the glazes above, mix 1 part dry powder stain to 2 parts Underglaze Base by weight. For example: a ½ pint of SP1050 (8 oz or 228 gms) in a container should be mixed with about 114 gms of stain. This is only a general guidline so be sure to test! Be aware that this can go up to cone 10 -- but it will flux and flow at this higher temperature.
