

WHEN ONLY THE BEST WILL DO

The Best Gets Better: New KilnMaster Features

We listed Skutt KilnMaster computer-controlled kilns for the first time in our 1993-94 catalog. It's hard to believe it's been over 30 years! Skutt has not rested on their laurels all that time: they've continued to adjust, tweak, up-grade and improve the KilnMaster. Check out these new features:

- **Current Sensing Data:** all KilnMaster and GlassMaster kilns are now equipped with a current sensor that reads voltage and amperage with just a few keystrokes. This, and other useful information, makes any process of troubleshooting or repair far less painful. And don't forget that Skutt's two-year straightforward parts -and- labor warranty still applies.
- **Programmable Temperature Limit:** Now you can set a maximum temperature for your kiln so that it can't meltdown even in the event of a programming mistake like entering too high a temperature on Ramp/Hold firing segment. Speaking of which...
- **Combine Cone Fire and Ramp/Hold Modes:** Have you ever wished for a little more control in the cooling period of a ConeFire firing? Or wanted the controller to correlate Ramp/Hold temperatures to their code equivalents? Now you can. (Also available as an upgrade for some KilnMaster & GlassMaster models.)
- **New Materials For Added Durability:** The Lid Lifter handle has a new ceramic handle with a high-temperature powder coating so it stays cool enough to handle even while the kiln is firing. Skutt also uses all corrosion-resistant materials through the construction of their kilns. This now includes nickel plating on all handles and latches. It's nickel that gives stainless steel its durability, so this is a great move to increase the longevity of your kiln.
