KILN WASH

A protective coating for kiln shelves that may catch glaze drips during firing. Kiln shelves are made of a porous refractory material. If melted glaze drips onto the shelf it may "glue" wares to the shelf, ruining both. Mix dry compound with water to a skim milk consistency and apply with brush to the kiln shelf. Apply several coats, allowing each to dry between coats, until you can't see the color of the shelf through the dry kiln wash. This is the no-crack blend.

KILN SHELF SCRAPER

6" x 3" abrasive brick with plastic handle for cleaning shelves.
KFS.....\$25.95

Kiln Shelves need to be one inch away from sides of kiln, element coils, kiln sitters or thermo-couples. Place witness cones on each shelf level to check for even heat distribution throughout the kiln. High Alumina (HA) shelves use a clay body with a much higher amount of alumina than regular core-dierite shelves. Alumina makes it more refractory (resistant to high temperatures) and dry-pressed rather than slip cast, which produces a much denser shelf with excellent warp-resistance. NT shelves are brought in from India (no duty) for a more economical alternative.
