## HOW TO USE A DRIP TRAY

1. Throw or carve a ring that is the exact diameter of the foot of the piece to be fired.
2. Make a release agent from white/wood glue and alumina hydrate.
3. Line up drip tray and foot of piece. Attach drip tray to foot with release agent.
4. Glaze as appropriate. Fire form and drip tray on a bisque cookie.
5. After firing, use a mallet to disengage drip tray from piece.
6. Use sand paper or grinder to polish the foot of the piece.
