Mason Stains® by Mason Color Works - Price List

Reference Notes

- Can be used as body stain in porcelain at ^6 or ^10.
- Use only as a 'body stain'.
- Max firing limit 2156°F (1180°C)
- Max firing limit 2300°F (1260°C)
- Max firing limit 1976°F (1080°C)
- DO NOT USE ZINC in glaze.
- May be used with or without zinc.
- Zinc not necessary, but gives better results.
- Best results with no zinc.
- Glaze must contain 6.7% to 8.4% calcium oxide CaO (12-15% CaCO₃).

* **Zinc-free glazes** ... generally should not contain magnesium oxide. Some stain colors containing zinc should be used in glazes without other or additional zinc. Zinc in the stain is in a combined form, but free zinc oxide can destroy the color.

* **Calcium oxide** content (in calcium carbonate) should be 12 to 15% for best color. Adding the molecular equivalent of calcium oxide with Wollastonite often gives better uniformity, but factor in Wollastonite's higher silica or the glaze will have a poor surface.
