NORTHSTAR DIES

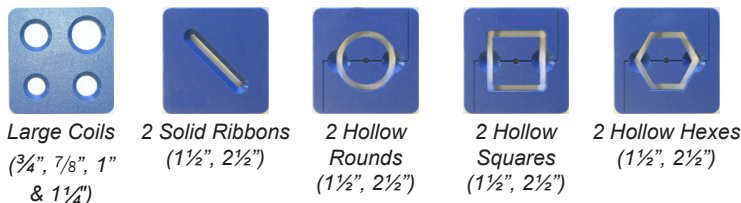

NorthStar's standard dies are made of 1/2" thick polyethylene, which is extremely wear-resistant and completely non-contaminating. The top edge (facing the clay in the extruder barrel) is beveled to compact the clay as it passes through for a crisper, more solid extrusion. In the hollow dies, there is a bevel on both the interior and exterior portions under each side of the bracket (which holds the hollow dies' center pieces) that helps the extrusion to "heal" after it has been split by the bracket. When you use NorthStar's hollow dies, the center part is automatically in exactly the right place and the wall thickness will be even all the way around.
