

RECYCLED WAX

Recycled wax is an economical way to make candles. The colors are uniform and consistent and generally come in deep, muted tones, but can change with each shipment. Melting instructions are included with each 1lb block.

— NEVER LEAVE BURNING CANDLES UNATTENDED —

- Approximate melting point is 115° - 154° F.
- Use a variety of containers; glass, milk cartons, paper cups, or professional molds.
- This wax already has fragrance added. It is NOT recommended to add more fragrance.
- Mixing with other waxes is also NOT recommended.
- Keep wick trimmed to 1/8" above candle surface for best burning results.
- Use for Candle Making, Ski/Snowboard Wax, Art Projects, or Reducing Friction.

Available colors: Forest Green, Cream, Cranberry, Light Gray, Pumpkin, Blue, Red.

MICROCRYSTALLINE WAX

Brown Mycocrystalline is the most common all-purpose wax favored by most sculptors. It has extremely small crystals, is very pliable and clean burning, with low surface stickiness. Also referred to as "amorphous wax", the molecular structure consists of a complex mixture of hydrocarbons that include normal paraffins, branched paraffins, monocyclic compounds, & polycyclic compounds. Holds detail well and exhibits shadows in the work unlike lighter colored waxes. Melts between 165° -175° F. Not suitable for candles, but can soften paraffin by using no more than 10% microcrystalline wax.

PLEASE NOTE: color can vary from caramel to a deep brown (see color variation above). Our vendor sends us what they have - with no option to special order a specific color for you.

AQUAVAR

Aquavar, a water-based resinous plastic, is a versatile paint product for art and craft use. Use it as an adhesive or for watercolor, gouache, posters, gesso, acrylics, collage, paper mache, decal transfer, unfired pottery glaze, and more.

- Bonds sand, rock, wood or metal to canvas or any porous surface. For tissue paper collage or paper mache, thin Aquavar about 50% with water.
- Make your own acrylic paints, any color: Add a few drops of liquid household detergent to full-strength Aquavar. Mix this liquid into dry tempera paint with a flat knife or the back of a spoon.
- See our free instruction sheet on how to use Aquavar for an unfired, crystal clear, oven-cured protective glaze.
- Aquavar seals and protects your projects made of plaster gauze, paper mache, and other porous materials.
