**KF1228**

Use kiln shelves and posts to build a multi-layered structure inside your kiln to maximize the usable space. Keep shelves one inch away from sides of kiln, element coils, kiln sitters or thermo-couples. Position posts over each other to help distribute the load weight. Three posts give more stable footing than four. Place witness cones on each shelf level to check for even heat distribution throughout the kiln.

**KILN WASH**

A protective coating for kiln shelves that may catch glaze drips during firing. Kiln shelves are made of a porous refractory material. If melted glaze drips onto the shelf it may "glue" wares to the shelf, ruining both. Mix dry compound with water to a creamy consistency and apply with brush to the kiln shelf. Apply several coats, allowing each to dry between coats, until you can't see the color of the shelf through the drying kiln wash.

**HOLLOW CORE SHELVES**

Full shelves for large 12-sided kilns have always been too heavy to use -- until now. The hollow-celled design reduces the weight by nearly half.
