

## What is Your Color Way?

### How should I glaze this? What color? What texture?

- **COLOR** is described by three characteristics: *hue*, *value*, and *intensity*.
- **HUE** is the color name: red, blue, yellow, etc.
- **VALUE** is the color's relative brightness or darkness in relation to the gray scale.
- **INTENSITY** is the purity and saturation of color, whether bright or dull.
- **TINT** = the color + white.
- **STONE** = the color + grey.
- **SHADE** = the color + black.
- **PRIMARY** colors are red, yellow and blue.
- **SECONDARY** colors are made by mixing two primary colors.
- **WARM** colors are reds, oranges and yellows.
- **COOL** colors are greens, blues and violets.
- Ceramic colors are influenced by the chemistry of the glaze and the clay body used. These samples are on our G-Mix 6, an off-white body. **More color samples and color flyer online: visit the address at above right!**

We do not stock color wheels at Georgies, but online tools are readily available.

### Harmonious Color Schemes

- **MONOCHROMATIC** schemes use any tint, shade or tone of just one color.
- **ANALOGOUS** schemes use colors adjacent to each other on the color wheel.
- **COMPLIMENTARY** schemes use colors directly opposite on the color wheel.
