

CRACKLE GLAZES

Formulated to create patterns of cracks similar to crazing, Crackle Glazes result in a unique antique look. To highlight the cracks created in firing, antique the piece with ink, acrylic paint, or a mineral-spirit-based woodstain. Apply a coat of the desired color to the fired piece and wipe off with a soft cloth. Crackle glazes are nontoxic, but safe for food or drink containers because of their cracked surface.

METALLIC GLAZES

Duncan Metallic Glazes are certified nontoxic, but are not for use on food or drink containers. Pay special attention to the recommended firing temperatures for the SY glazes because they're not all the same. Though it may be tempting to "double up" on a firing because of their target temperature, SY1024 and SY1025 should not be fired in a kiln also containing greenware. SY1026 should not be fired in the same kiln load with cone 06 glazes containing copper.

Spectrum Metallic Glazes are lead-free, but contain other heavy metals that may leach from surfaces in contact with food or drink. They should not be used on food or drink containers. Spectrum metallics should not be taken internally; they contain ingredients not suitable for ingestion or inhalation. They should also not be used by women who are pregnant or contemplating pregnancy. Keep these glazes out of the reach of children. If swallowed, promptly seek medical attention. **These glazes may vary in appearance depending on the conditions of usage, firing cycle, glaze application thickness, and the underlying clay body.**
